

EAST DUNKARD WATER AUTHORITY AGENDA

SPECIAL MEETING 09/28/2022

Call to Order

Roll Call

Public comment

SPWA UPDATE: SPWA received their permit for the interconnection and Sugar Grove. EDWA's permit should be submitted very soon. Weekly work group meetings for all parties will be starting soon. These meetings are very important for a smooth transition.

Engineer is meeting with County tomorrow to go over the projects for Pioneer Grant and submit other projects for possible other grant money that is available. They are looking at the valve for the Griffin Tank and coming up with the best and most cost-effective plan to put this in place. This will be a cost savings for EDWA as we will no longer need to man the plant 24/7 and this will satisfy DEP's request.

The EDWA Board would like to thank Crystal Simmons and the Greene County Commissioner's on the hard work that has been put into the grant process for EDWA and helping to secure and manage the funding.

Update on PUC petition (Steven Grugin)

Distribution Report: Five leaks have been repaired this week and several more have been investigated. All PA One Calls have been submitted for the next 6 that are on the schedule.

Plant Manager Report: The process of decreasing the Delpac in the clarifier has started. It is believed by the Engineers and the DEP that at this point it can be reduced, and it should stabilize the flock blanket. Turbidity numbers are being monitored carefully to make sure that they do not rise above the acceptable standards. If they are correct this will help bring the cost of our chemical bill down.

Motion to adjourn
